

## Durability

Products containing Polygiene antimicrobial technology is designed to last the life time of the product in normal use. Wear and tear of the product will open up new surfaces with antimicrobial effect. Our experience is based both on products used in real practice and products that have been tested in lab with accelerated ageing.

Case1: Toilet seats and electrical equipment of amino material containing Polygiene maintain its antimicrobial effect after 10 years of use.

Case2: Laminate samples with Polygiene have been aged in autoclave or in dish washer machine in order to simulate more than 10 years with excellent result.
